## **About The Membership Benefits Report**

The Membership Benefits report communicates the financial value of credit union membership to credit union staff, members, potential members, community leaders and policy makers. The report compares credit union dividend rates, loan rates, and fees to those of banking institutions in the state<sup>1</sup>. It combines those comparisons with the state call report data to develop an overall estimate of the annual financial benefits provided to members.

It is important to remember that the report gives a *conservative* estimate of benefits. For example, it does not consider non-financial benefits such as access to a large ATM network, financial counseling, or auto buying services.

When interpreting the report, remember that any benefit above \$0 means credit unions are delivering financial benefits compared to the average banking institution.

Not all credit unions will deliver lofty financial benefits. Greater financial benefits tend to be found among credit unions that offer a greater variety of services and those with lower operating expense ratios (i.e., higher economies of scale). On the other hand, higher operating expense ratios tend to be associated with other non-financial benefits, such as personalized “high-touch” services.

The report measures benefits at one distinct point in time. Operational and strategic decisions – building new branches, expanding fields of membership, introducing new products – will undoubtedly be reflected in credit union pricing decisions (and estimated benefit levels).

## *The Benefits of Membership*

Credit unions generally provide financial benefits to members through lower loan rates, high saving rates, and fewer fees than banking institutions.

The Credit Union National Association (CUNA) estimates that Virginia credit unions provided \$895,286,055 in direct financial benefits to the state's 6,290,589 members during the twelve months ending September 2009.

**These benefits are equivalent to \$142 per member or \$270 per member household <sup>(1)</sup>.**

The per-member and per-household benefits delivered by Virginia credit unions are substantial. But, these benefits are *averages*. Mathematically, that means the total benefits provided are divided across all members (or all member households) - even those who conduct very little financial business with Virginia credit unions.

Consider this:

**Financing a \$25,000 new automobile for 60 months at a Virginia credit union will save members an average \$254 per year in interest expense compared to what they would pay at a banking institution in the state.**

Further, loyal members - those who use the credit union extensively - often receive total financial benefits that are much greater than the average.

Virginia credit unions excel in providing member benefits on many loan and saving products. In particular, Virginia credit unions offer lower average loan rates on the following accounts: new car loans, used car loans, personal unsecured loans, first mortgage-fixed rate, first mortgage-adjustable rate, home equity loans, credit cards loans.

Virginia credit unions also pay members higher average dividends on the following accounts: regular savings, share draft checking, money market accounts, certificate accounts, IRAs.
